PROPOSALS FOR THE FACILITATION OF SHIPPING DURING THE COVID-19 PANDEMIC

Joint ICS and IATA statement on the importance of facilitating crew changes

Submitted by ICS

SUMMARY

<i>Executive summary:</i>	ICS and IATA have issued a joint statement on the importance of Governments designating international airports which can be used to facilitate crew changes during the COVID-19 pandemic
<i>Strategic direction, if applicable:</i>	Not applicable
<i>Output:</i>	Not applicable
<i>Action to be taken:</i>	Paragraph 3
<i>Related documents:</i>	None

1 ICS would like to bring a joint statement issued by ICS and the International Air Transport Association (IATA) to the attention of the Council. The statement is attached in the annex.

2 The statement highlights the importance of Governments doing what is necessary to facilitate crew changes and repatriation during the COVID-19 pandemic. The statement, inter alia, calls on Governments to designate international airports which can be used to allow seafarers to move between their home countries and ports of embarkation and disembarkation for the purpose of conducting crew changes, and highlights the joint collaboration between the shipping and aviation sectors on this critically important matter.

Action requested of the Council

3 The Council is invited to consider the information provided in paragraphs 1 and 2 and take action, as appropriate.

IATA and ICS: Governments Must Facilitate Ship Crew Changes

15 April 2020 (Geneva) - The International Air Transport Association (IATA) and the International Chamber of Shipping (ICS) are jointly calling on governments to take urgent measures to facilitate crew change flights for seafarers. Due to the COVID-19 restrictions, seafarers are having to extend their service onboard ships after many months at sea, unable to be replaced following long tours of duty or return home.

Shipping is vital to the maintenance of global supply chains, but the current situation is unsustainable for the safety and wellbeing of ships' crews and the safe operation of maritime trade. Each month about 100,000 merchant seafarers need to be changed over from the ships on which they operate to ensure compliance with international maritime regulations protecting safety, health and welfare.

As a result of government-imposed travel restrictions due to COVID-19, flights to repatriate or position marine personnel are unavailable. Immigration and health screening protocols are also hampering the ability of merchant ships to conduct vitally necessary crew changes. IATA and ICS are working together to come forward with safe and pragmatic solutions that governments can implement to facilitate crew changes at certain airports.

"Seafarers are unsung heroes who everyday throughout this COVID-19 crisis are going above and beyond the call of duty to ensure that countries are kept supplied with the goods they need. We are working with the airlines to come forward with solutions. We now need governments to support our seafarers and facilitate safe passage for them to get home to loved ones and be replaced by crew members ready to keep supply chains open," said ICS Secretary General, Guy Platten.

"Airlines have been required to cut passenger services in the fight to stop the spread of COVID-19. But if Governments identify airports that seafarers can use for crew changes and make appropriate adjustments to current health and immigration protocols, airlines can help keep global logistics moving," said Alexandre de Juniac, IATA's Director General and CEO.

Designated Airports

ICS and IATA are calling on all governments to designate a specific and limited number of crew change airports for the safe movement and repatriation of crew. This would achieve critical mass for the resumption of crew change flights to these airports, keeping global supply chains open.

Priority airports should include those close to major shipping lanes which also have direct air connections to principal seafarer countries of residence, such as China, India and the Philippines as well as destinations in western and eastern Europe.

Facilitating Movement of International Transport Personnel

Aviation and shipping companies face common challenges in carrying out crew changes while complying with immigration and quarantine restrictions introduced by most governments around the world.

As authorities continue to battle COVID-19, international transport personnel operating aircraft and ships, or transiting international borders for duty, are often affected by national restrictions designed for passengers and non-essential personnel. When applied to crew not interacting with local communities, these restrictions unnecessarily jeopardize the ability of airlines and shipping companies to keep global supply chains operating.

IATA and ICS are working with their global regulators – the International Civil Aviation Organization (ICAO) and the International Maritime Organization (IMO) – on recommendations to governments for standardized procedures and protocols for positioning crews whilst preventing the further spread of COVID-19.

Keeping Global Supply Chains Operating

The aviation and maritime transport industries are the lifeblood of the global economy, moving the world's goods and products which are necessary to allow society to continue to function efficiently throughout the COVID-19 crisis.

- By volume, some 90% of global trade is delivered by ship, including food, energy, raw materials and manufactured products.
- Airlines carry, in addition to passengers, some 35% of global trade by value, including critical medicines and medical supplies.

G20 governments, at their recent emergency meetings, committed to "minimize disruptions to trade and global supply chains" and identified the need to prioritize keeping air and sea logistics networks open and functioning efficiently.

Shipping companies and airlines are cooperating to meet this priority by ensuring that reliable operations continue throughout the pandemic. However, these networks will grind to a halt if replacement crews are unavailable for duty. Governments must take urgent action now to avoid further damage to the battered global economy.

About ICS

The International Chamber of Shipping (ICS) is the principal international trade association for merchant shipowners and operators, representing all sectors and trades and over 80% of the world merchant fleet.
